System Requirements

# General Overview

System Models

System Requirements

# Behavioral Equivalences

## Motivation

- ▶ **Verification:** check whether **implementation** conforms to **specification**
- ▶ **Implementation:** transition system with **more actions** added
- ▶ **Method:** **abstracting** and **comparing** with specification

# Behavioral Equivalences

## Motivation

- ▶ **Verification:** check whether **implementation** conforms to **specification**
- ▶ **Implementation:** transition system with **more actions** added
- ▶ **Method:** **abstracting** and **comparing** with specification

**Behavioral equivalence** needed to **compare** behavioral models

# Behavioral Equivalences

## Example

?

# Behavioral Equivalences

## Requirements

Behavioral equivalence should:

- ▶ neglect immaterial differences (**not too fine**)
- ▶ note important differences (**not too coarse**)
- ▶ should be preserved under context (**congruence**)

depends on the particular **application domain**

# Behavioral Equivalences

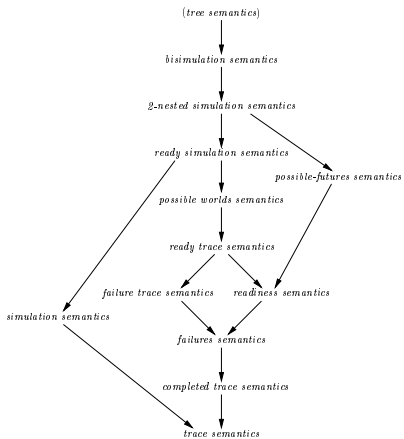

## Running Example

# Linear-Time Branching-Time Spectrum

## Strong fragment

# Trace Equivalence

## Traces of a State

For  $t \in S$ ,  $Traces(t)$  is minimal set satisfying:

1.  $\epsilon \in Traces(t)$

# Trace Equivalence

## Traces of a State

For  $t \in S$ ,  $Traces(t)$  is minimal set satisfying:

1.  $\epsilon \in Traces(t)$
2.  $\checkmark \in Traces(t)$  when  $t \in T$

# Trace Equivalence

## Traces of a State

For  $t \in S$ ,  $Traces(t)$  is minimal set satisfying:

1.  $\epsilon \in Traces(t)$
2.  $\checkmark \in Traces(t)$  when  $t \in T$
3.  $a\sigma \in Traces(t)$  when  $t \xrightarrow{a} t'$  and  $\sigma \in Traces(t')$

# Trace Equivalence

## Traces of a State

For  $t \in S$ ,  $Traces(t)$  is minimal set satisfying:

1.  $\epsilon \in Traces(t)$
2.  $\checkmark \in Traces(t)$  when  $t \in T$
3.  $a\sigma \in Traces(t)$  when  $t \xrightarrow{a} t'$  and  $\sigma \in Traces(t')$

## Trace Equivalence

For states  $t, t'$ ,  $t$  is trace equivalent to  $t'$  iff  $Traces(t) = Traces(t')$ .

# Trace equivalence

## Example

1.  $\epsilon \in \text{Traces}(t)$ ,
2.  $\checkmark \in \text{Traces}(t)$  when  $t \in T$ ,
3.  $a\sigma \in \text{Traces}(t)$  when  $t \xrightarrow{a} t'$  and  $\sigma \in \text{Traces}(t')$ .

What are the sets of traces?

# Trace Equivalence

## An Exercise

1.  $\epsilon \in \text{Traces}(t)$ ,
2.  $\checkmark \in \text{Traces}(t)$  when  $t \in T$ ,
3.  $a\sigma \in \text{Traces}(t)$  when  $t \xrightarrow{a} t'$  and  $\sigma \in \text{Traces}(t')$ .

$$\text{Traces}(s_2) = \text{Traces}(s_3) = \{\epsilon, \checkmark\}$$

# Trace Equivalence

## An Exercise

1.  $\epsilon \in \text{Traces}(t)$ ,
2.  $\checkmark \in \text{Traces}(t)$  when  $t \in T$ ,
3.  $a\sigma \in \text{Traces}(t)$  when  $t \xrightarrow{a} t'$  and  $\sigma \in \text{Traces}(t')$ .

$$\text{Traces}(s_2) = \text{Traces}(s_3) = \{\epsilon, \checkmark\}$$

$$\text{Traces}(s_1) =$$

$$\{\epsilon, \text{coffee}, \text{tea}, \text{coffee}\checkmark, \text{tea}\checkmark\}$$

# Trace Equivalence

## An Exercise

1.  $\epsilon \in \text{Traces}(t)$ ,
2.  $\checkmark \in \text{Traces}(t)$  when  $t \in T$ ,
3.  $a\sigma \in \text{Traces}(t)$  when  $t \xrightarrow{a} t'$  and  $\sigma \in \text{Traces}(t')$ .

$\text{Traces}(s_1) =$

$\{\epsilon, \text{coffee}, \text{tea}, \text{coffee}\checkmark, \text{tea}\checkmark\}$

$\text{Traces}(s_0) =$

$\{\epsilon, \text{coin}, \text{coin coffee}, \text{coin tea}, \text{coin coffee}\checkmark, \text{coin tea}\checkmark\}$

# Trace Equivalence

## An Exercise

1.  $\epsilon \in \text{Traces}(t)$ ,
2.  $\checkmark \in \text{Traces}(t)$  when  $t \in T$ ,
3.  $a\sigma \in \text{Traces}(t)$  when  $t \xrightarrow{a} t'$  and  $\sigma \in \text{Traces}(t')$ .

$\text{Traces}(s_0) =$

$\{\epsilon, \text{coin}, \text{coin coffee}, \text{coin tea}, \text{coin coffee}\checkmark, \text{coin tea}\checkmark\}$

# Trace Equivalence

## An Observation

$$\text{Traces}(s_0) = \text{Traces}(t_0) = \{\epsilon, \text{coin}, \text{coin coffee}, \text{coin tea}, \text{coin coffee}\checkmark, \text{coin tea}\checkmark\}$$

**Moral of the Story:** Trace equivalence is **too coarse** (neglects important differences).

# Completed Trace Equivalence

$CTraces(t)$ :

- ▶  $\epsilon \in CTraces(t)$  if  $t \notin T$  and  $\neg \exists_{t' \in S, a \in Act} \text{ s.t. } t \xrightarrow{a} t'$
- ▶  $\checkmark \in CTraces(t)$  if  $t \in T$
- ▶  $a\sigma \in CTraces(t)$  if  $t \xrightarrow{a} t'$  and  $\sigma \in CTraces(t')$

States  $t, u \in S$  **completed trace equivalent** iff

- ▶  $Traces(t) = Traces(u)$  and
- ▶  $CTraces(t) = CTraces(u)$

# Completed Trace Equivalence

## An Exercise

- ▶  $\epsilon \in CTraces(t)$  if  $t \notin T$  &  $\neg \exists_{t' \in S, a \in Act} t \xrightarrow{a} t'$
- ▶  $\checkmark \in CTraces(t)$  if  $t \in T$
- ▶  $a\sigma \in CTraces(t)$  if  $t \xrightarrow{a} t'$  and  $\sigma \in CTraces(t')$

$$CTraces(t_3) = CTraces(t_4) = \{\checkmark\}, CTraces(t_5) = \{\epsilon\}$$

# Completed Trace Equivalence

## An Exercise

- ▶  $\epsilon \in CTraces(t)$  if  $t \notin T$  &  $\neg \exists_{t' \in S, a \in Act} t \xrightarrow{a} t'$
- ▶  $\checkmark \in CTraces(t)$  if  $t \in T$
- ▶  $a\sigma \in CTraces(t)$  if  $t \xrightarrow{a} t'$  and  $\sigma \in CTraces(t')$

$CTraces(t_3) = CTraces(t_4) = \{\checkmark\}$ ,  $CTraces(t_5) = \{\epsilon\}$   
 $CTraces(t_1) = \{coffee\checkmark\}$ ,  $CTraces(t_2) = \{tea\checkmark\}$

# Completed Trace Equivalence

## An Exercise

- ▶  $\epsilon \in CTraces(t)$  if  $t \notin T$  &  $\neg \exists t' \in S, a \in Act \ t \xrightarrow{a} t'$
- ▶  $\checkmark \in CTraces(t)$  if  $t \in T$
- ▶  $a\sigma \in CTraces(t)$  if  $t \xrightarrow{a} t'$  and  $\sigma \in CTraces(t')$

$CTraces(t_1) = \{coffee\checkmark\}$ ,  $CTraces(t_2) = \{tea\checkmark\}$

$Traces(t_0) = \{coin, coin\ coffee\checkmark, coin\ tea\checkmark\}$

# Completed Trace Equivalence

## An Exercise

- ▶  $\epsilon \in CTraces(t)$  if  $t \notin T$  &  $\neg \exists_{t' \in S, a \in Act} t \xrightarrow{a} t'$
- ▶  $\checkmark \in CTraces(t)$  if  $t \in T$
- ▶  $a\sigma \in CTraces(t)$  if  $t \xrightarrow{a} t'$  and  $\sigma \in CTraces(t')$

$$Traces(t_0) = \{coin, coin\ coffee\checkmark, coin\ tea\checkmark\}$$

# Completed Trace Equivalence

## An Observation

$Traces(s_0) = Traces(t_0) =$   
 $\{\epsilon, coin, coin\ coffee, coin\ tea, coin\ coffee\checkmark, coin\ tea\checkmark\}$

$CTraces(s_0) = \{coin\ coffee\checkmark, coin\ tea\checkmark\}$

$CTraces(t_0) = \{coin, coin\ coffee\checkmark, coin\ tea\checkmark\}$

# Completed Trace Equivalence

## An Observation

$Traces(s_0) = Traces(t_0) =$   
 $\{\epsilon, coin, coin\ coffee, coin\ tea, coin\ coffee\checkmark, coin\ tea\checkmark\}$

$CTraces(s_0) = \{coin\ coffee\checkmark, coin\ tea\checkmark\}$

$CTraces(t_0) = \{coin\ coffee\checkmark, coin\ tea\checkmark\}$

# Completed Trace Equivalence

## An Observation

$Traces(s_0) = Traces(t_0) =$   
 $\{\epsilon, coin, coin\ coffee, coin\ tea, coin\ coffee\checkmark, coin\ tea\checkmark\}$

$CTraces(s_0) = \{coin\ coffee\checkmark, coin\ tea\checkmark\}$

$CTraces(t_0) = \{coin\ coffee\checkmark, coin\ tea\checkmark\}$

**Conclusion:** Completed trace equivalence is **too coarse**.
